What to do in case of an emergency

Try to stay calm to help your child

Ingestion
- Get medical help
- If the child is not vomiting, do not induce this

Eye or skin splashes
- Rinse cautiously with water for several minutes

Medical help
- The doctor may need the following information
  - When did this happen?
  - What are the symptoms?
  - What first-aid measures did you perform?
  - What is the age and/or weight of the child?
  - Does the child have known allergies?
  - How much has been swallowed or splashed into the eye or onto the skin? If the entire capsule is gone, it is probably about 25-30 milliliters.
  - What is the brand name of the product?
  - Have the original product packaging or label at hand.

How to contact the NHS Helpline (United Kingdom)
- 111
